Hanging Personal Safety Partition
Assembly Instructions

Assembly / Installation Process

1. Start by identifying the various parts from the list (above). Also, check the quantities.

2. Unroll the Panel Assembly, then orient the Logo in the lower right corner.

3. Slip an "S" Hook through each slot in the Top bar. Crimp the ends shut with a plier tool.

4. Slip one end of each chain onto the other end of the same two "S" Hooks, and crimp the ends shut with a plier tool.

5. Clip the Side Mounting Clip to the Ceiling Grid next to the wall.

Note: If Installation is not along a wall, use (2) "J" Hooks.

6. Clip the "J" Hook onto the Ceiling Grid at about 48" from the first Mounting Clip.

7. Slip an "S" Hook into each of these Ceiling Hooks, and crimp the ends closed.

8. Raise the Partition Assembly by holding onto the chains.

9. Hook the chains onto the "S" hooks at a height which will allow a minimum of 12" of open space between the ceiling and the Partition top.

10. When the proper height is achieved, crimp the "S" Hooks closed with a plier tool.

11. Attach, and crimp, "S" hooks between the loose ends of the Chains and the taught portion of the Chain.

12. Attach the Foam Bumpers to the Bottom Beam of the Panel Assembly by peeling off the tape backing and pressing the Bumper onto the end of the Bottom Rail.
