

Heavy Duty Welding Screens

Protection Wherever Needed

Goff's Heavy Duty Welding Screens create movable work areas using a portable design, providing flexible welding safety separation in your facility.

Protection from Incidental Welding Flash

Our Weldview material is certified to protect against UV light, sparks, and fumes from everyday shop activities, protecting employees and finished surfaces in your shop.

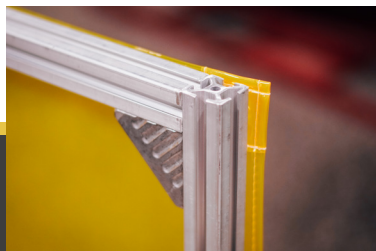

Durable Components

Shop environments are tough, but our durable frames are designed to take a hit without sustaining damage, while remaining lightweight enough to move around your shop.

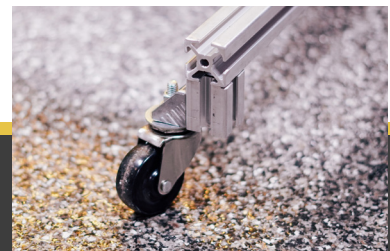

Weldview Material

Our 14 mil Weldview material protects staff from incidental UV light, grinding sparks, arc welding and flame cutting.

Durable & Lightweight

Heavy Duty Welding Screens are built using lightweight T-Slotted Aluminum framing, built for the toughest shop environments.

Easy to Move

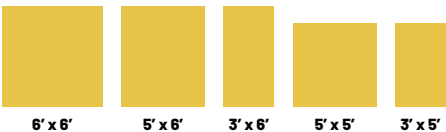

Add caster kits to your welding screens for easy relocation for your shop's daily changing needs & tasks.

Modular Design

By linking multiple screens together, you can effectively partition off welding areas from the rest of your shop without the need for permanent construction. This saves money up front, and creates the ability to rearrange when needs change.

Medium Duty Welding Screens

Weldview Material

Our 14 mil Weldview material protects against UV light & sparks, secured at the top and bottom to stretch between framing to provide visibility & safety in your facility.

Simple Assembly

Goff's Medium Duty Welding Screens ship partially assembled. Unroll the weldview screen, secure the upper and lower rails, attach the feet, and you're ready to go!

Economical Safety Solution

Medium duty screens are an economical option for lower traffic areas of your shop or spaces that won't take as much abuse from constant movement & activity.

6' x 6' Medium Duty Welding Screen

Heavy Duty Screens

- 1 3/16" T-Slotted Aluminum Framing Extrusion with Angle Braces
- 14 mil Weldview, 4 Colors
- Durable Hinge Kit Available
